

STS at SITEVI, Montpellier 2013

Jean-Luc Faure, Sales Manager for STS France, hosted our booth at the VINSEO stand during SITEVI 2013 in Montpellier, France.

Jean-Luc is well known in the local market since many years, including previously as a salesman for **Materiel PERA**, the French winery equipment specialist.

Justin Corrans (STS South Africa), the official SITEVI photographer & **Jean-Luc Faure** (STS France) thank all who visited us at SITEVI.
In turn, we thank **Severine Henin** of VINSEO for her stand hosting & generally organizing us all.

The **STS Series** centrifuges are primarily used for clarification of juice, wine & lees, eliminating DE or Filter Powder from the cellar whilst preserving wine quality.

And increasingly, the **STS Series** is now also being used in France for the clarification of red juice, and red wine & lees clarification after PERA's patented **Flash Détente** and **Gulfstream** processes.

Many shall recall that PERA historically licensed the **STS Series** centrifuges for European wineries and markets under the brand **PERA STS Series**.

However, today the **STS Series** are marketed & serviced directly by Separator Technology Solutions in France.
